What	Linear Algebra	Fourier Series
Vector Space	$\mathbb{R}^n$	Piecewise smooth 2π-periodic functions on $\mathbb{R}$
Inner Product	$\langle \mathbf{u}, \mathbf{v} \rangle = \sum_{i=1}^{n} u_i v_i$	$\langle f(t), g(t) \rangle = \frac{1}{\pi} \int_{-\pi}^{\pi} f(t) g(t) dt$
Orthonormal Basis $\left(\mathbb{R}^3\right)$	$\{(1,0,0),(0,1,0),(0,0,1)\}$	$\{1, \cos nt, \sin nt\}$
Representation of a Vector in the Basis	$\mathbf{x} = \sum_{i=1}^{n} a_i \mathbf{e}_i$	$f(x) = \frac{a_0}{2} + \sum_{n=1}^{\infty} a_n \cos nt + \sum_{n=1}^{\infty} b_n \sin nt$
Coefficients are Projections	$a_i = \langle \mathbf{x}, \mathbf{e}_i \rangle$	$a_0 = \langle f(t), 1 \rangle$ $a_m = \langle f(t), \cos mt \rangle$ $b_m = \langle f(t), \sin mt \rangle$

Table 1: Vector Spaces: Linear Algebra vs. Fourier Series

Note: Some people think that the orthonormal basis for the Fourier series should be $\{1, \sqrt{2}\cos nt, \sqrt{2}\sin nt\}$, since $\langle 1, 1 \rangle = \frac{1}{\pi} \int_{-\pi}^{\pi} 1^2 \, dt = \frac{1}{\pi} \int_{-\pi}^{\pi} dt = \frac{1}{\pi} t \Big|_{-\pi}^{\pi} = \frac{1}{\pi} \left(\pi - (-\pi)\right) = \frac{1}{\pi} 2\pi = 2$. OTOH, $\langle \cos nt, \cos nt \rangle = \frac{1}{\pi} \int_{-\pi}^{\pi} \cos^2 nt \, dt = \frac{1}{\pi} \pi = 1$.
